Range

ESD-boxes

The greatest risk for electronic components are electrical charges. ESD container diverts charges certainly and thus protect electrostatically sensitive components. This is possible, because the plastic is mixed with carbon. The carbon fibers make the tank black and make especially sure that the container is antistatic.

Danger sign for ESD-sensitive components

Characteristics

- Conductible
 - Space-saving (volume reduced by stacking)
 - Individual Barcode-system for steerage and identification
 - Hazardous goods approval
 - Automatable
 - Palette-appropriate
-
