

PIONEERING CONTAINER MANAGEMENT SOFTWARE

NEVER MORE CONTAINERS OUT OF CONTROL

OUR SERVICES

Consulting, analysis & design

Our consulting and design focuses on meeting your goals. Analysis of structures, processes and targets paves the way for a container management system setup and process flow design that will effectively support your empties management. We combine 25 years of logistics know-how with the function of a leading container management system on the market.

Support

Our user & system support is ready to answer your questions at any time and will support you by phone or remote connection on the web portal and through mobile applications. We offer support, web training and the complete system administration of our cloud-based container management software as a service.

Implementation

System configurations, i.e. the setup of accounts, users, rights and roles, etc., may grow very complex depending on scope. Intense preparation and testing phases are therefore part of implementation. We will only start putting our implementation plan into practice after coordinating it with you once you and receiving your release. This includes pilot phases, user training and any hardware installations you may need.

Monitoring & data analyses

Generating data is easy. Validating, analyzing, interpreting them and deriving measures subsequently requires skill. Our container management experts monitor booking quality, supply reports and recommend further actions to you.

OUR FUNCTIONS

Order Management Request empties, schedule them and generate automated refill orders	Receipt/dispatch & storage booking Book inbound goods, outbound goods from and to partners or post to internal storage sites	Roles & authorizations Use our clever system for roles and authorizations on account, user and item levels
Booking differences Solve booking differences between partners quickly and smoothly	Inventory management Get a complete live overview of the container inventories and needs throughout your supply chain	Inventory Manage inventory corrections and your overall pool and identify loss
Interfaces Comprehensive interface options	Reports Pull & send many reports for the most important indices	Active / Passive accounts Use the option to handle logistics partner accounts in the passive mode if necessary
End devices Profit from our web-based and local applications	Account reconciliation Automatically reconcile your postings with third-party systems	Dashboards & data analysis Use customized dashboards and our comprehensive data analysis tool

OUR TECHNOLOGY

RFID HARDWARE & RFID TAGS

We offer setup, installation and commissioning of stationary and mobile RFID hardware at your sites. Of course, our hardware support will always keep an eye on the function of your devices in operation. We also offer the hardware, barcode labels and RFID tags.

MOBILE DATA RECORDING

We offer the right applications for mobile data recording in Windows as well as for Android-based devices. In many cases, you will be able to use the hardware infrastructure you already have.

RFID TESTS

Use of RFID must be thoroughly tested. In order to determine the optimal hardware configuration for your applications and to ensure that the RFID tags in your processes are legible, we offer our customers practice-oriented, indicative feasibility studies and field tests on site.
